Digital Ultrasonic Cleaner (Sonicator) with Timer, Heater & Basket

SALIENT FEATURES:

- Inner Tank & Outer Body is made of Stainless Steel
- Digital Red LED display
- Temperature & Timer function
- Sports ceramic heaters which are efficient
- Drainage & cooling fan from 6L onwards
- High performance transducers

Digital Ultrasonic cleaning is based on the cavitation effect caused by high frequency wave vibration in the fluid caused by the ultrasonic transducers. Microscopic bubbles are formed and the implode violently causing cavitation which creates an intense scrubbing action on the surface of the item being cleaned. The bubbles are small enough to penetrate microscopic dents & crevices, cleaning them thoroughly and consistently.

Ultrasonic Cleaning is extremely effective at removing dirt and grime which would normally require tedious manual cleaning by hand. It has been used to clean a wide variety of instruments and mechanical parts such as carburetors, toner heads, metal parts, gears, watches, surgical instruments, PCBs, etc returning them to almost like new condition without damaging parts.

FEW APPLICATIONS:

- Industrial parts
- Surgical Tools
- PCB Boards
- Toner Heads
- Lens
- Jewellery
- Automotive Parts

Lab grade series is ideal for applications where operation time is shorter than 30 minutes. These ultrasonic cleaners can be used for a maximum of 30 minutes at a stretch, after 30 minutes of operation, 15 minutes of rest time is required before it can be used again.

Various size probes for Probe Sonicator

Also known as Horns

Horns (also known as probes) are made from titanium and machined to specific sizes and shapes. When driven at their resonant frequency, they expand and contract longitudinally. This mechanical vibration is amplified and transmitted down the length of the probe. In liquid, the probe causes cavitation which constitutes the main mechanism for sample processing.

Choosing the appropriate horn is extremely important. The sample volume to be processed is directly related to the tip diameter. Smaller tip diameters (Microtip probes) deliver high intensity sonication, but the energy is focussed within a small, concentrated area. Larger tip diameters can process larger volumes, but offer lower intensity.

SPECIFICATIONS:

Part Number	Tip Diameter	Processing Capacity	Power Ratio	Amplitude (microns)
PPS-2	Ø 2	0.5 ~ 5 ml	1 ~ 40%	320 µm
PPS-3	Ø 3	3 ~ 10 ml	1 ~ 50%	380 µm
PPS-6	Ø 6	10 ~ 100 ml	1 ~ 70%	200 µm
PPS-8	Ø 8	20 ~ 200 ml	1 ~ 80%	160 µm
PPS-10	Ø 10	30 ~ 300 ml	1 ~ 90%	140 µm
PPS-12	Ø 12	50 ~ 500 ml	20 ~ 95%	120 µm

Amplitude mentioned is calculated at 100% power.

Spare/Additional Probes are to be attached with a set of wrenches especially designed for easily removing & attaching the probes to the ultrasonic convertor.
